KataFizBuzz

The Purpose for this challenge is to teach TDD for newcomers and those who want to practice and craft their actual skills.

Challenge Description:

Return an array containing X numbers from 1 to N, where N is the parametrized value and X could be an array with any size. N must be greater than 0.

If the element number of the array is less than 0 than you must throw an exception.

Bellow you can find the constraints for our challenge

- If the value is a multiple of 3: use the value 'Fizz' instead
- If the value is a multiple of 5: use the value 'Buzz' instead
- If the value is a multiple of 3 & 5: use the value 'FizzBuzz' instead

Instructions about how to run the project

1. Go to the root of the project

2. Run `npm install`

3. Run `ng test` and have fun

Do not forget:

1. 1 The FIRST principle. The tests must be Fast, Independent, Repeatable and Timely (We Don't want unicorn remember de KISS principle)
2. KISS is Key for the Success
3. Divide the problem into small pieces
4. Enjoy the challenge and Have Fun 😃

Extra challenge

If you have already finished the challenge, you can add the following features:

- A number is fizz if it is divisible by 3 or if it has a 3 in it;
- A number is buzz if it is divisible by 5 or if it has a 5 in it;
